1. Introduction

This document aims to provide an inventory of reference ODA Component as input for ODA reference implementation blueprint. This inventory of ODA Components is specifically aimed at the software application landscape of service providers.

The approach taken to develop and categorize the candidate ODA components in this inventory is meant to help the design and implementation of solutions that meet the architectural design requirements of ODA.

The target audience is Service Provider technology managers, product & R&D managers of Software Vendors, Solution architects of Systems Integrators, Application managers of Service Providers, Independent Software developers, Equipment suppliers, and Solution Managers.

© TM Forum 2026. All Rights Reserved.

2. Objective and Scope

An ODA compliant software marketplace would improve how CSP will source and develop their software. ODA compliant software will transform the traditional long cycle, non-agile process. The willingness is to move toward a standardized:

1. Proof of concept
2. Procurement
3. Software DesignOps

that reflects the realities of the digital landscape.

The ODA Component Inventory is to accelerate ideation, realization and standardization of the ODA's building blocks. At this stage, the ODA inventory is for informative purposes. ODA inventory does not have the aim of being a mandate for the companies approaching the ODA building blocks development.

At the time of this publication, the focus is on the Core application functions of a Telecom Service Provider. In this regard, the Telecom Application Map (TAM) and Frameworx provide input to identify AS-IS inventory of application functions.

The ODA Functional Architecture provides the framing used to define the boundaries of components. For each of the ODA Functional blocks the details regarding the core function of each component, in terms of functionalities and Open APIs are used to establish levels of modularization and featuring of components.

This document contains the master list of the TM Forum ODA Components.

At the time, many of the components were not yet specified. In this regard, the Telecom Application Map (TAM) should be used to provide an AS-IS inventory of application functions.

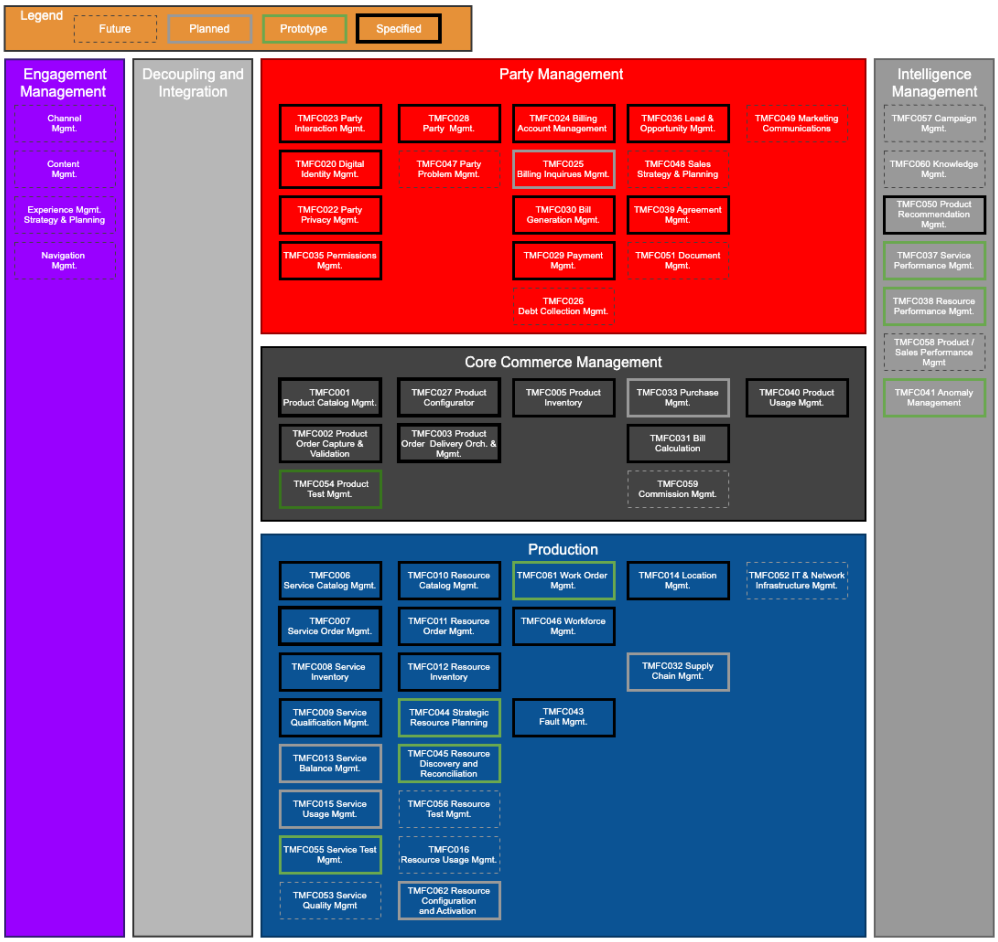
3. ODA Component Taxonomy

Below is the ODA Component Taxonomy. This view provides the ODA Component mapping to ODA Functional Architecture blocks. TAC-293 - DONE

3.1. ODA Component List: agreed and prioritized components



© TM Forum 2026. All Rights Reserved.

Status	Description
Future	Component agreed and not yet planned
Planned	Component agreed and planned in member project sprints
Prototype	Component agreed with specification instantiated but not finalized (SID, eTOM, OpenAPIs requires amendments) - the component is not CTK ready
Specified	Component agreed with finalized specification - the component is CTK ready

© TM Forum 2026. All Rights Reserved.

ODA Functional Block	Component Name	Component ID	Status	Version	Description	Notes
Core Commerce Management	Product Catalog Management	TMFC001	Specified	**2.1.2**	The Product Catalog Management component is responsible for organizing the collection of Products and Product Offering specifications that identify and define all requirements of a product or a product offering that can be commercialized.	15 Jul 2023 : TMFC001 - Component-OAS-Specification-v1beta2
Core Commerce Management	Product Order Capture & Validation	TMFC002	Specified	**3.0.0**	This component captures what a customer wants to order based on the CSP's Product Catalog. It enables configuration of the product offerings and products desired, provides quotes, checks the eligibility of the customer order, and completes it with information needed such as the related parties or associated billing account and the delivery appointment. This component owns quote management, order capture and validation, using dedicated components (eg Offering Configurator, Service Qualification, Party Management) when needed.	
Core Commerce Management	Product Order Delivery Orchestration and Management	TMFC003	Specified	**3.0.0**	This component orchestrates the delivery of Product Orders (status accepted). Based on the level of Product specification information available in the Product Catalog (eg prerequisite links between product specifications, links between product and CFS specifications...) it

ODA Functional Block	Component Name	Component ID	Status	Version	Description	Notes
					determines in which order the product specification level order items need to be delivered, and to which CFS (or Resource) specification each ordered product corresponds, and prepares and addresses each related service (or Resource) order to the production system in charge. During the delivery process execution, this component is in charge of the evolution of the status of the product specification level order items, and of the related product items, triggering updates of the related inventories. After the delivery of the customer product order items, this component is also in charge of the commercial closure of the order. It includes update of the Product Inventory (status and starting/end date of tariffs and discounts) and potential commercial rules control (e.g., receipt of the contract document signed by the customer).	
Core Commerce Management	Product Inventory	TMFC005	Specified	**1.0.4**	The Product Inventory component is responsible for storage and exposure of products that are assigned to and used by Parties. This component has functionality that enables creation of inventory items, inventory organization, inventory search or	

© TM Forum 2026. All Rights Reserved.

ODA Functional Block	Component Name	Component ID	Status	Version	Description	Notes
					filter, inventory monitoring and tracking, inventory control and inventory auditing. The minimum check to be performed upon inventory item creation or update is for global consistency with related Product Catalog information.	
Production	Service Catalog Management	TMFC006	Specified	1.2.1	The Service Catalog Management component is responsible for organizing the collection of service specifications that identify and define all requirements of a service that can be performed. This component has the functionality that enables presentation of a customer-facing view so users are able to search and select services they need, as well as a technical view to enable definition and setup of what is needed to deliver service specifications (Customer Facing Service Specifications (CFSSs) and Resource Facing Service Specifications (RFSSs)) contained in the service catalog. The Service Catalog Management component has functionalities that include creation of new service specifications, managing service specifications, administering the lifecycle of services, describing relationships between service specification attributes, reporting on service specifications and their changes, and facilitating easy and	

© TM Forum 2026. All Rights Reserved.

ODA Functional Block	Component Name	Component ID	Status	Version	Description	Notes
					systematic indexing and access to services, as well as facilitating automation of the service delivery process.	
Production	Service Order Management	TMFC007	Specified	**1.2.2**	Service Order Management (SOM) component is the entry point to the Production Domain. It oversees delivery of Customer-Facing-Service (CFS) resources (network and service platform equipment). The SOM exposes the API ServiceOrder. It is triggered when the Product Order Delivery Orchestration And Management component calls this API to request CFS delivery. To achieve delivery of a CFS, the SOM orchestrates the CFS delivery process which identifies possible RFS and chooses one, using the catalog and technical inventory. It selects the resources (servers, equipment, etc.) and their instances, and requests the Resource Order Management (ROM) component to update selected resource instances to deliver CFS. Requests sent to the ROM contain the CFS and the list of configured resource instances to be updated.	
Production	Service Inventory	TMFC008	Specified	**1.2.1**	The Service Inventory component is responsible for storage and exposure of CFS (Customer Facing Services) that are associated to Product Inventory items. It is	

© TM Forum 2026. All Rights Reserved.

ODA Functional Block	Component Name	Component ID	Status	Version	Description	Notes
					also responsible for RFS (Resource Facing Service) definition, mapping between CFS and RFS and mapping with infrastructure/network resources. The Service Inventory component has functionality that enables creation of inventory items, inventory organization, inventory search or filter, inventory monitoring and tracking, inventory control and inventory auditing. The minimum check to be performed at inventory item creation or update is for global consistency with related Service Catalog information.	
Production	Service Qualification Management	TMFC009	Specified	**1.1.1**	The Service Qualification Management component is responsible for checking and validating the availability of a service according to specified and configured business rules. It must identify at least one technical solution (RFSspec) available to deliver the service (CFSspec) and check the availability of all the resources types involved in this technical solution. No resources are allocated during service qualification. The Service Qualification Management component has functionality that includes checking service feasibility status and publishing or reporting service qualification results but also calculated service delivery due date and identified	

© TM Forum 2026. All Rights Reserved.

ODA Functional Block	Component Name	Component ID	Status	Version	Description	Notes
					need of an appointment at the customer site. Service Qualification Management can also be responsible for the cost calculation of the technical solution identified, when it cannot be determined at catalog design time (complex B2B services). This information will be used as an input to price calculation.	
Production	Resource Catalog Management	TMFC010	Specified	**1.3.2**	The Resource Catalog Management component is responsible for organizing the collection of resource specifications that identify and define all requirements for a resource. The Resource Catalog Management component has the functionality that enables presentation of a customer-facing view, so users are able to browse and select resources they need, as well as a technical view to enable definition and setup of resources contained in the resource catalog. Additional functionalities include capturing new resource specifications, managing resources (registering assets and components and identifying and mapping connections/relationships), administering the lifecycle of resources, describing relationships between resources, reporting on resources and changes to their	

© TM Forum 2026. All Rights Reserved.

ODA Functional Block	Component Name	Component ID	Status	Version	Description	Notes
					attributes, and facilitating easy access to identify and assign resources.	
Production	Resource Order Management	TMFC011	Specified	**1.2.0**	The Resource Order Management Component manages the end-to-end lifecycle of a resource order request. This includes validating resource availability as well as the resource order request. Other functionality includes resource order assurance, resource order decomposition and resource order tracking, along with orchestrating activation and the test and turn-up processes.	
Production	Resource Inventory	TMFC012	Specified	**2.1.1**	The Resource Inventory component owns accounting for resources (all inputs - including stock, parts, assets, production components etc.) that are owned and/or held for allocation and/or use by the organization. The Resource Inventory component has functionality that includes inventory item creation, inventory organization, inventory search or filter, inventory monitoring and tracking, inventory control (organization, re-stock management etc.) and inventory auditing. The minimum check to be performed at inventory item creation or update is for global consistency with related Resource Catalog information.

ODA Functional Block	Component Name	Component ID	Status	Version	Description	Notes
Production	Service Balance Management	TMFC013	Planned	n/a	Service Balance Management component is responsible for tracking usage, controlling usage, and facilitating the addition or deduction to balances related to ordered, active or delivered services. Service Balance Management component has functionality that includes storing and maintaining credits, debits, and reserve of balance data to support real-time and offline credit control needs. SrvBlcMgmt component supports monetary and non-monetary balances to be defined for users (or accounts) in any scenario (e.g. sole users, shared users, associated, users, hierarchical users, and cross-hierarchical user relationships).	• SID: not ready • eTOM: ready • APIs: Not ready
Production	Location Management	TMFC014	Specified	**1.2.1**	The Location Management component allows easy reference to geographic places important to other entities, where a geographic place is an entity that can answer the question "where?" This component could be a facade tool into GIS systems (eg Google Maps).	
Production	Service Usage Management	TMFC015	Planned	n/a	Service Usage Management component is responsible for tracking of any service. Service Usage Management component has functionalities that include collection	• SID: ready • eTOM:

© TM Forum 2026. All Rights Reserved.

ODA Functional Block	Component Name	Component ID	Status	Version	Description	Notes
					of usage data from all service points, converting service usage data, transforming service usage data, formatting service usage data according to business needs, providing service usage data reports, and sharing / exchanging service usage data with specified components.	• APIs: Not ready ready - pre-production
Production	Resource Usage Management	TMFC016	Future	n/a	Resource Usage Management component is responsible for tracking and typing of resources. Resource Usage Management component has functionalities that include collection of usage data from all resources, converting resource usage data, transforming resource usage data, formatting resource usage data according to business needs, providing resource usage data reports, and sharing / exchanging resource usage data with specified components.	• SID: ready • eTOM: ready • APIs: ready
Party Management	Digital Identity Management	TMFC020	Specified	**1.1.1**	The Digital Identity Management component is responsible for authentication of parties (customers, employees, partners), and resources authentication.	
Party Management	Party Privacy Management	TMFC022	Specified	**1.1.2**	The Party Privacy Management component defines the privacy policy rules established	

© TM Forum 2026. All Rights Reserved.

ODA Functional Block	Component Name	Component ID	Status	Version	Description	Notes
					by the CSP (according to applicable regulations such as GDPR in Europe); applies these rules to each Party interacting with the CSP and to all of their personal information and personally identifiable information; and registers explicit opt-in and opt-out given by Parties regarding the use of their personal information for dedicated purposes, such as marketing.	
Party Management	Party Interaction Management	TMFC023	Specified	**1.1.2**	Party Interaction deals with the initial greeting and welcoming of a new contact. This will typically be the first component in a customer experience journey, shared by unassisted (self-service, retail kiosk) or assisted (call center, retail store) channels. It will identify known Parties or new Parties and react appropriately to propose available actions. It records all the interactions for the Parties from all channels.	
Party Management	Billing Account Management	TMFC024	Specified	**2.1.1**	The Billing Account Management (BAM) component provides all the needed functionalities to create, configure and modify billing accounts. The BAM component supports and handles the following capabilities/functionalities: setup/creation of billing accounts,

ODA Functional Block	Component Name	Component ID	Status	Version	Description	Notes
					associate payment plan(s), associate payment method(s) (optional), account taxes/fees exception management, define account associations, provide account balance details, set up billing contacts, set up billing preferences (eg bill cycle frequency, invoice media type, invoice template option, etc.)	
Party Management	Billing Inquiries Management	TMFC025	Planned	n/a	Billing Inquiry Management component is responsible for handling the capture, responding and reaction to an inbound billing inquiry. Billing Inquiry Management component covers functionality that capture billing-specific inquiries, managing the lifecycle of bill-related inquiry, and reporting and closing a billing inquiry.	• SID: Ready 24.5 • eTOM: ready • APIs: Not ready
Party Management	Debt Collection Management	TMFC026	Future	n/a	Debt Collection Management component is responsible for tracking and following up with debtors, predicting and prioritizing debt recover, handling the collection of debts, handling debt litigation tasks, supporting repossessions, sending payment reminders, skip tracing and offering debt payment terms.	• SID: ready • eTOM: ready • APIs: Not ready
Core Commerce Management	Product Configurator	TMFC027	Specified	**2.2.0**	The Product Configurator component empowers sales by offering the right product combinations, controlling	

© TM Forum 2026. All Rights Reserved.

ODA Functional Block	Component Name	Component ID	Status	Version	Description	Notes
					discounting, and automating approvals through support of configuration, pricing and the production of configuration and pricing results used in quote generation activities.	
Party Management	Party Management	TMFC028	Specified	**2.1.1**	The Party Management **component** is responsible for the capture, validation and management of Parties. A Party may be an individual or organization that has a relationship with an enterprise. In this context it is responsible for the end-to-end lifecycle of: Individual, Organization and its related sub-entities, Contact Medium, Currency and tax exemption certificates, Identification, and Community.	15 Jul 2023 : TMFC028 - Component-OAS-Specification-v1beta2.yaml
Party Management	Payment Management	TMFC029	Specified	**1.2.2**	Payment Management **component** manages methods used by parties to make payments. It also administers payment plans, handles payments, assigns payments against bills, settlements, and other objects requiring payments.	15 Jul 2023 : TMFC029 - Component-OAS-Specification-v1beta2.yaml
Party Management	Bill Generation Management	TMFC030	Specified	**3.0.0**	Bill Generation management manage the party invoice management. It addresses the invoice formatting, presentation and dispatching to the proper means of communication.	
Core Commerce Management	Bill Calculation	TMFC031	Specified	**3.0.0**	The Bill Calculation processes all charges against billing accounts during bill cycles.	

© TM Forum 2026. All Rights Reserved.

ODA Functional Block	Component Name	Component ID	Status	Version	Description	Notes
					Bill Calculation can be executed both on a cyclic basis and on demand. It performs calculations with bill compilation of charges, credits, fees & taxes, including prorata, at various levels, such as product and/or account level that have been generated since the last run for that account, applying promotions and discounts as well.	
Production	Supply Chain Management	TMFC032	Future	n/a	Supply Chain Management addresses: • Resource & Service Planning • Resource & Service Information Management • Sourcing Management • Service & Resource Inventory Management • Production Management • Location Management • Transportation Management (part of Logistics Management) • Returns Management • Logistic Management / Stock availability check	Scoping required
Core Commerce Management	Purchase Management	TMFC033	Planned	n/a	Purchase Management deals with the purchase of products and services and associated financial checks. It also	Review together with Supply Chain Management and

ODA Functional Block	Component Name	Component ID	Status	Version	Description	Notes
					includes the application of business policy (such as sustainability), legal and regulatory checks.	update the definition. This component is intended for Partner Purchase Management
Party Management	Permissions Management	TMFC035	Specified	**1.1.1**	The Permissions Management component manages and exposes roles and related permissions. This component enables creation, modification and deletion of permissions and delegate permissions. When a specific role is assigned, a set of permissions is inherited.	
Party Management	Lead and Opportunity Management	TMFC036	Specified	**1.2.1**	Lead and Opportunity Management **component** provides the functionality for lead and opportunity capture, qualification, reporting, and support during the pre-sales stage.	
Intelligence Management	Service Performance Management	TMFC037	Prototype	**1.2.1**	Service Performance Management **component** monitors, analyzes, and reports on end-to-end service performance. This can include a real-time, end-to-end view to ensure that each service is functioning correctly as well as a historical view. These functions build on the Resource Performance data and active end-to-end service performance test data to provide a view of a service. The	

© TM Forum 2026. All Rights Reserved.

ODA Functional Block	Component Name	Component ID	Status	Version	Description	Notes
					component provides a key input to determine Quality of Service.	
Intelligence Management	Resource Performance Management	TMFC038	Prototype	**1.2.1**	Resource Performance Management **component** monitors, analyzes, and reports on the performance of the service provider's resources.	
Party Management	Agreement Management	TMFC039	Specified	**1.1.1**	The Agreement Management component is responsible for creating, storing, editing, and tracking agreed arrangements with related terms and conditions over a lifecycle. The component manages offers, records acceptance, and associated considerations and intentions to establish agreements as legally binding. This component also provides workflows and templates that facilitate collaboration, communication and negotiation of agreements between parties, and administers the translation of agreements into contracts, when required. It provides secure storage, version control, compliance management, and renewal notifications for agreements.	
Core Commerce Management	Product Usage Management	TMFC040	Specified	**1.1.1**	Product Usage Management component provides a standardized mechanism for creation, update, retrieval, import and export of a collection of usages. It allows a service provider to retrieve usage	

© TM Forum 2026. All Rights Reserved.

ODA Functional Block	Component Name	Component ID	Status	Version	Description	Notes
					generated by a partner service platform in order to rate it, and provides rated usage to a partner for consumption follow-up purposes.	
Intelligence Management	Anomaly Management	TMFC041	Prototype	**1.1.1**	The Anomaly Management component is responsible for predicting, detecting and managing anomalous patterns in the usage and behavior of products, services and resources in order to avoid occurrence of problems. Anomaly Management has functionality for predicting, detecting and flagging unusual patterns or outliers for products, services and resource entities, and initiating mitigatory actions to prevent outlier patterns in usage or behavior becoming problems. In the event of failure to predict or detect an early warning sign of a possible problem occurrence, the component hands off mitigatory actions to the Party Problem Management component.	
Production	Fault Management	TMFC043	Specified	1.0.1	Fault Management **component** involves identifying, diagnosing, and resolving issues that prevent the communication resources and their overlaying services from functioning correctly. Its scope covers this functionality at the ODA Production layer while business related	• SID: ready • eTOM: ready • APIs: ready

© TM Forum 2026. All Rights Reserved.

ODA Functional Block	Component Name	Component ID	Status	Version	Description	Notes
					resolutions are not part of its scope. The Fault Management component manages the currently active alarms or problem candidates, potentially modifying or enhancing their data to make persistent alarms more actionable. It may apply logic to preserve alarms that reflect actual problems, eliminating those that are merely symptoms. Various actions can be taken using the alarm/problem information as part of the resolution process, such as applying automated corrective actions or opening trouble tickets.	
Production	Strategic Resource Planning	TMFC044	Prototype	1.0.0	Strategic Resource Planning is used to plan networks and resource elements both initially and for growth. It will coordinate both logical and physical resource growth. Inputs are geographic locations, addresses and existing infrastructure, service forecasts, current and projected network utilization, new technologies, and retiring technologies. It creates optimized designs based on a chosen strategy and network architecture. It delivers detailed cost estimations for the business plan for the newly designed network in order to support the investment decision.	n/a

© TM Forum 2026. All Rights Reserved.

ODA Functional Block	Component Name	Component ID	Status	Version	Description	Notes
Production	Resource Discovery and Reconciliation	TMFC045	Prototype	1.0.0	Resource Discovery and Reconciliation provides functionality to scan the network for new managed resources and changes in existing managed resources using technology specific protocols. It supports reconciling the discovered information with the Resource Inventory. It will instantiate Resources in the Resource Inventory according to the business rules defined in the resource onboarding configuration.	n/a
Production	Workforce Management	TMFC046	Specified	1.1.2	Workforce Management **components** provides capabilities to describe teams, organizations, skills and availability of sales / technical experts. It provides the ability to reserve time slots to carry out assigned tasks (internal or customer facing). It allows the reservation (and updates / rescheduling) of appointments and interventions.	n/a
Party Management	Party Problem Management	TMFC047	Future	n/a	Party Problem Management component is responsible to collect claims and/or problems reported by parties (customers, suppliers, partners etc.). The claim / problem fulfillment is demanded to the components owning the specific data and processes. Party claims / problems can include:	• SID:not ready (discussion on going for Trouble / Problem ABE) • eTOM: ready, Customer Problem L2

© TM Forum 2026. All Rights Reserved.

ODA Functional Block	Component Name	Component ID	Status	Version	Description	Notes
					• General questions on products purchased and being used by the party. • Problems with products already purchased and being used by the party either due to lack of education or service/network problems. • Problems with a material purchase from the service provider, even if they do not have an account with the said service provider. • General inquiries, complaints, and commendations.	• APIs:not ready
Party Management	Sales Strategy and Planning	TMFC048	Future	n/a	Sales Management is responsible for sales forecasting, customer sales planning, party (employee and partner) sales objectives.	• SID: not ready, Market sales Forecast ABE (not described) • eTOM: n/a • APIs: not ready
Party Management	Marketing Communications	TMFC049	Future	n/a	Marketing Communication component is responsible to manage marketing aspects of a Product Offering.	• SID: Ready • eTOM:

© TM Forum 2026. All Rights Reserved.

ODA Functional Block	Component Name	Component ID	Status	Version	Description	Notes
						• APIs:not ready
Intelligence Management	Product Recommendation Management	TMFC050	Specified	1.1.1	The Product Recommendation Management component is responsible for evaluating and providing Party recommendation offerings based on the history and real-time context of a Party.	• SID: ready • eTOM: ready • APIs: ready
Party Management	Document Management	TMFC051	Future	n/a	Document Management component is responsible to produce and store party document.	• SID: Ready 24.0 • eTOM: n/a • APIs: ready, but needs alignment with the changes in SID
Production	IT and Network Infrastructure Management	TMFC052	Future	n/a	IT and Network Infrastructure Management component is responsible to manage the enterprise inventory of IT and Network Components within their lifecycle.	• SID: not ready • eTOM: not ready • APIs: not ready
Production	Service Quality Management	TMFC053	Future	n/a	Service Quality Management is responsible for the lifecycle and mgmt for Service Level Specifications, associated Service Level Objectives (SLO) and their thresholds.	• SID: ready • eTOM: n/a • APIs: ready •

© TM Forum 2026. All Rights Reserved.

ODA Functional Block	Component Name	Component ID	Status	Version	Description	Notes
Core Commerce Mgmt.	Product Test Management	TMFC054	Prototype	1.0.1	Product Test Management component is responsible for product test specification for each Product Specification, and identification of the possible tests to be launched automatically by the delivery or assurance processes, or manually by the customer or user or by a CSR, to test that a product is functioning correctly. It utilizes tests available at the service specification level (or resource specification level for a tangible product). Product Test Management owns end-to-end execution and reporting of product tests according to the context and/or the actor.	• SID: ready • eTOM: ready • APIs: TMF769 v5 in preview
Production	Service Test Management	TMFC055	Specified	1.0.0	Service Test Management is responsible for managing the service test specification and executing tests based on this specification to ensure the service operates correctly. Service Test Specification involves capturing potential tests for each Service Specification that can be initiated either automatically or manually by the service user. These tests are derived from those available at the service specification or resource specification level. The scope of the component includes the end-to-end execution and reporting of	• SID: Ready • eTOM: n/a • APIs: ready

© TM Forum 2026. All Rights Reserved.

ODA Functional Block	Component Name	Component ID	Status	Version	Description	Notes
					tests, tailored to the specific context and actor involved.	
Production	Resource Test Management	TMFC056	Future	n/a	Resource Test Management s responsible for the end-to-end execution of a test for a resource, either for manual or automatic testing, in order to ensure that this resource is working properly.	• SID: Ready • eTOM: n/a • APIs: not ready
Intelligence Management	Campaign Management	TMFC057	Future	n/a	Campaign Management is responsible for managing the lifecycle of marketing campaigns, sometimes referred to as "closed loop marketing". Service Provider marketers need to respond to changing market environments with marketing initiatives that push highly targeted messages to increasingly focused segments.	• SID: Ready • eTOM: n/a • APIs: not ready
Intelligence Mgmt.	Product / Sales Performance Management	TMFC058	Future	n/a	Product / Sales Performance Management component is responsible for monitoring, analysing and reporting product and sales performance.	• SID: • eTOM: n/a • APIs: not ready
Core Commerce Mgmt.	Commission Management	TMFC059	Future	n/a	Commission management component is responsible for calculating party (CSR, partners, resellers, etc.) commissions and incentives over customer sales.	• SID: • eTOM: n/a • APIs: not ready •

© TM Forum 2026. All Rights Reserved.

ODA Functional Block	Component Name	Component ID	Status	Version	Description	Notes
Intelligence Mgmt.	Knowledge Management	TMFC060	Future	n/a	Knowledge Management (KM) supports the identification, collation, labelling, storage and sharing of knowledge. Knowledge includes insights, experiences, intellectual properties (both external and internal), organizational processes and practices that are vital for the enterprise operation and development. It ensures that an organization is having access to the same set of Information and Data about the knowledge which is acquired with the time and past experience.	• SID: not ready • eTOM:not ready • APIs: not ready
Production	Work Order Management	TMFC061	Protoype	1.0.0	Work Order Management component is responsible for the setup and maintenance requests from initiation to completion. Work Order is a formal request that outlines essential details related to necessary setup / maintenance tasks. These details typically include: • **Nature of the task**: A description of the work that needs to be done. • **Location**: Where the maintenance or repair is required. • **Required materials**: The items or resources needed for the job.	15 Sep 2025 Pending Description update in Specification to align with YAML

© TM Forum 2026. All Rights Reserved.

ODA Functional Block	Component Name	Component ID	Status	Version	Description	Notes
					• **Assigned personnel**: The technician or contractor responsible for executing the work. • **Timeline for completion**: The expected timeframe within which the task should be finished.	
Production	Resource Configuration and Activation	TMFC062	Planned	1.0.0	The Resource Configuration and Activation component is responsible to configure and activate the resource instances and as well to provide query on resource instances to acquire the resource activation states and attributes.	• SID: Needs separation of scope between this component and Resource Inventory Management.

3.2. Proposed ODA Components Candidates

These components are identified for further analysis.

Function Block	Component Name	Component ID	Priority	Status (Jira Reference)	Description	Remarks
Engagement Management	Channel Management	n/a	Medium		Channel Management encompasses the means by which customers contact Service Providers as well as how service provider agents communicate internally. Channel Management	Scope and target to be clarified.

© TM Forum 2026. All Rights Reserved.

Function Block	Component Name	Component ID	Priority	Status (Jira Reference)	Description	Remarks
					provides the means to capture and manage activities via the available contact channels (e.g. on-line contact centre, web or off-line email, post, fax etc.). It also provides the means for an activity can be completed on a different channel from which the request originated.	
Engagement Management	Content Management	n/a	Low		Content Management enables enterprise to Acquire, Document, Host and Share knowledge.	Scope and target to be clarified.
Engagement Management	Experience Management Strategy & Planning	n/a	Low		Experience Management Strategy & Planning will define the experience strategy and plan the implementation of the strategy.	Scope and target to be clarified. (7-Jul-22: Please note this was written and reviewed quickly in order to get a description for the component heat mapping activity. It may change in a later version.)
Engagement Management	Navigation Management	n/a	Medium		Navigation Management provides a configurable, workflow-driven navigation – Through means such as configurable business processes, it automatically drives the agent or user journey workflow	Scope and target to be clarified.

Function Block	Component Name	Component ID	Priority	Status (Jira Reference)	Description	Remarks
					and screen navigation according to the context of the customer interaction and other customer profile information across all functions used.	
Core Commerce Mgmt.	Bespoke Solution Management	n/a	Medium	TBD	TBD	
Core Commerce Management	Product Assurance Management	n/a	High		Product Assurance is responsible for the management and execution of proactive and reactive rule based activities to ensure that products provided to customers are continuously available and performing according to set values for performance and quality. In cooperation with monitoring and orchestration functions Product Assurance will create an autonomic closed loop control of the performance and quality as well as mitigation of product problems and fall-outs.	Scope and target to be clarified.
Production	Fall Out Management	n/a	Medium	TBD	The Fallout Management component is responsible for the reactive detection, analysis, and subsequent resolution of errors	The scope and target of the component are detailed in the TMFS011 use case from IG1228 *How to Use ODA*.

Function Block	Component Name	Component ID	Priority	Status (Jira Reference)	Description	Remarks
					occurring during the execution of product, service, and resource orders. Additionally, it has the potential to address issues in any other process executed by the operator. Its initial scope is limited to the 'Fallout Management' functional domain within the 'Shared' domain of the functional framework.	
Production	Resource Capability Delivery	n/a	Medium		Resource Capability Delivery provides the functionality to support the roll-out project for a new network or a network extension	Scope and target to be clarified.
Production	Root Cause Analysis Management	n/a	Medium	TBD	TBD	
Production	Service Management Intelligent Controller	n/a	Medium/High?	TBD	A Service Controller where the control behaviour is augmented by use of AI /ML and specific foundation models using access to wide set of current and historical data. It may be deployed in multiple roles (COSMIC). For example in NaaS these roles include: • Multi-technology Domains	The controller encapsulates Closed Loop Management Functions (Based on TR315) Intent management Functions Based on IG1253 optional), Observability Functions for assurance / root cause analysis and Domain intelligence Functions. It can be

Function Block	Component Name	Component ID	Priority	Status (Jira Reference)	Description	Remarks
					• Operational Domains • E2E Service Management Domains	profiles to simpler variants such as orchestrator, Closed Loop Management.
Production	Data Collector (“Adapter”?)	n/a	?	TBD	Collects assurance data from different sources. This will be typically done in non-TM Forum APIs. The data (alarms, measurement, usage records) is then translated to TM Forum standard data model entities and the output is broadcasted by standard TM Forum APIs	Might be merged with requirements for Modern Data Architecture Sel Service Data Platform
Production	Data Processor (:Adapter”)	n/a	?	TBD	Process data to known data entities.	Might be merged with requirements for Modern Data Architecture Sel Service Data Platorm
Production	Trouble Ticket Management	n/a	Medium	TBD	TBD	
Intelligence Mgmt.	Experience Insight Management	n/a	Low	TBD	Experience Insight Management will be used to analyze data to provide insight into the customer and user experience. Outputs may include insights to enable the improvement of the experience,	Scope and target to be clarified.

Function Block	Component Name	Component ID	Priority	Status (Jira Reference)	Description	Remarks
					such as NPS, churn probability, etc.	
Intelligence Mgmt.	Accounting Management	n/a	Low	TBD	Accounting Management is responsible for: • General Ledger, as central repository of all financial transactions and statistical information • Subledger Accounting, that includes auxiliary Customer, Supplier and Stock accountancies • Consolidation Management, that enables consolidation of financial statements of a group entities or subsidiaries	
Intelligence Mgmt.	Intent Management	n/a	High		An intent management ODA component is a software element that facilitates the communication and execution of user intents within an autonomous network environment. It translates high-level user business objectives or user intents into actionable instructions for the underlying

Function Block	Component Name	Component ID	Priority	Status (Jira Reference)	Description	Remarks
					network and service infrastructure. It encompasses the processes, tools, and mechanisms required to capture, interpret, validate, and execute intents, ensuring alignment between business objectives and technical implementations within the ODA ecosystem. Its scope would include: Intent Definition and Capture, Intent Interpretation and Validation, Intent Translation and Mapping, Intent Lifecycle Management, Intent Orchestration and Automation, Intent Monitoring and Optimization, Integration with Other ODA Components using TMF Open APIs, and Intent API.	
Others (to be clustered)	SLA Management	n/a	Low		SLA Management includes the required functionality to assure that SLA agreements made between operators and customers are met. This includes processing measurements made elsewhere and checking the measurements and taking appropriate actions when the specified agreements are not met. Note: Customers can	Scope and target to be clarified.

Function Block	Component Name	Component ID	Priority	Status (Jira Reference)	Description	Remarks
					include partners and 3rd party providers.	
Others (to be clustered)	Revenue Assurance	n/a	Medium		Revenue Assurance is the collection of data quality and process improvement methods that reduce leakages, improve profits, revenues, and cash flows without influencing demand. Although, as its name suggests, Revenue Assurance is mainly about revenues and profits, revenue assurance activities in a communications' organization has significant implications on operational and strategic aspects of the service provider. These methods can be employed in proactive, active, or reactive manners as part of providing "Revenue Assurance" for the service provider.	Scope and target to be clarified.
Production	Capability Catalog	n/a	Medium	TAC-1220	An **Enterprise Capability Catalog transforms organizational know-how**—often locked in human memory—into a discoverable, machine-readable, and AI-usable format. It serves as a dynamic "menu of what the organization can	Inception form in progress, approval pending

Function Block	Component Name	Component ID	Priority	Status (Jira Reference)	Description	Remarks
					do", enabling agentic AI to orchestrate solutions based on customer or operational intent. It acts as a dynamic knowledge layer that enables organizations to break down operational silos, accelerate service delivery, and enhance customer experiences through smarter integration and contextual awareness.	
Production	Intent-Based service specification design	n/a	Medium	TAC-1215	In today's highly competitive digital market, the ability to rapidly respond to customer demands and launch new services is essential for the survival of Communication Service Providers (CSPs). However, traditional manual service design processes have increasingly become a major bottleneck to business agility. As service catalogs expand exponentially, the design process has grown exceedingly complex, time-consuming, and error-prone—severely limiting innovation speed and operational efficiency. To address this critical challenge, we propose introducing the Intent-	Inception form in progress, approval pending

Function Block	Component Name	Component ID	Priority	Status (Jira Reference)	Description	Remarks
					Based ServiceSpec Design. This component that shifts the service design paradigm from the cumbersome “how to implement” approach to the intuitive “what is needed” model. With this engine, service designers simply express their goals in high-level business terms, and the system automatically and intelligently generates complete service specifications that comply with technical standards and business policies—then recommends them to the designers.	
TBC	Open Gateway API Management	n/a	Medium	TAC-1305	This component is designed to provide a comprehensive management for Open Gateway APIs. It will cover the entire API lifecycle— from capability registration and subscription to usage monitoring. This functionality is essential for ensuring the efficient, secure, and sustainable commercialization of Open Gateway services.	Inception form in progress, approval pending

4. Component Interaction Diagram

Component interaction diagrams will be included here as they are completed. They are organized by ODA Function Block.

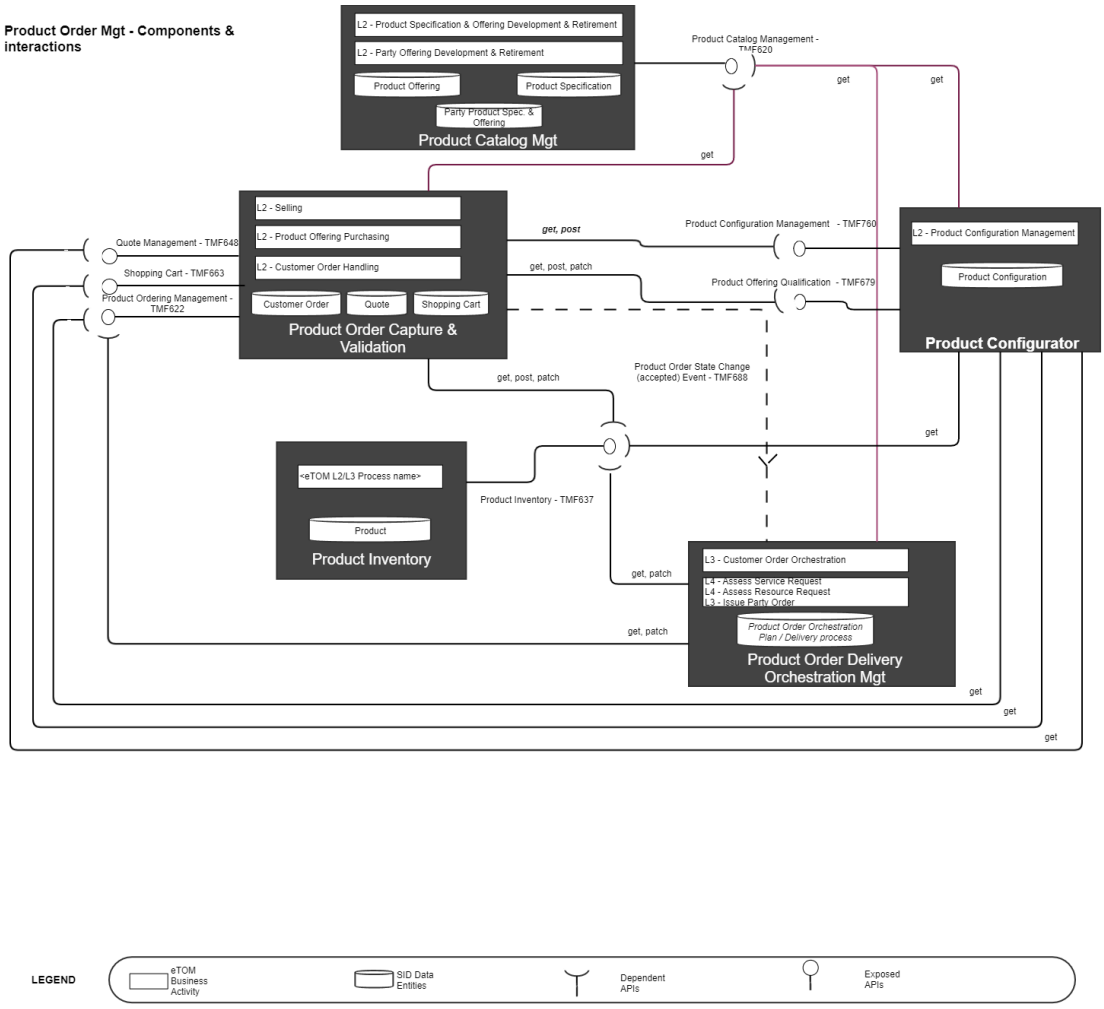
4.1. Core Commerce Management

The objective is to represent the different ODA components identified in the global scope of Product Order management, and how they interact together.

Component Name	ID
Product Order Capture & Validation	TMFC002
Product Inventory	TMFC005
Product Configurator	TMFC027
Product Order Delivery Orchestration & Management	TMFC003
Product Catalogue Management	TMFC001

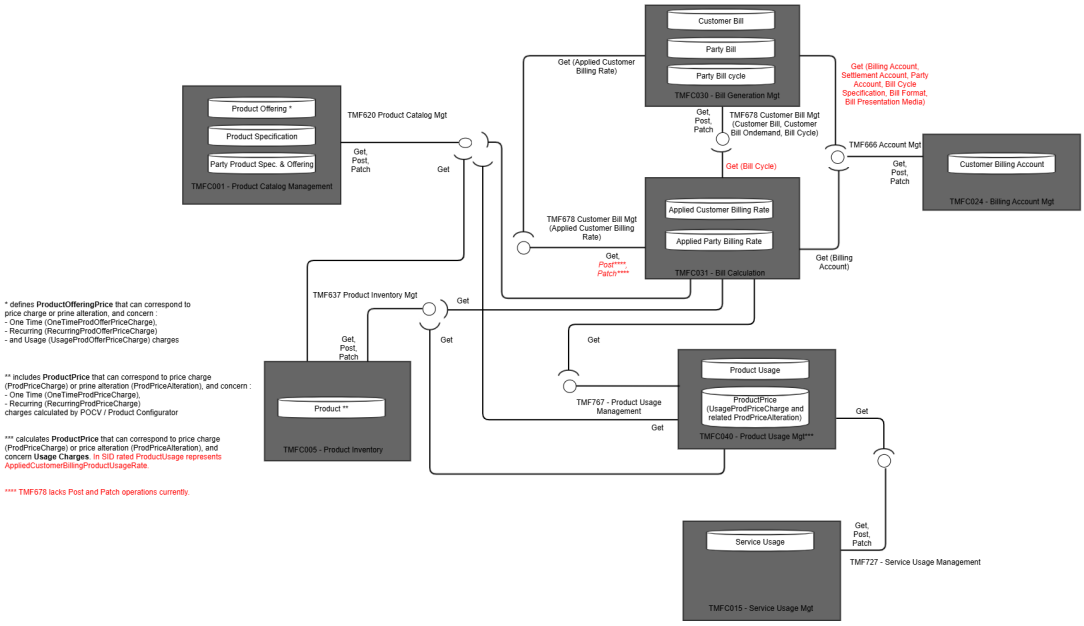
© TM Forum 2026. All Rights Reserved.

4.1.1. Product Order Mgmt. Components and Interactions



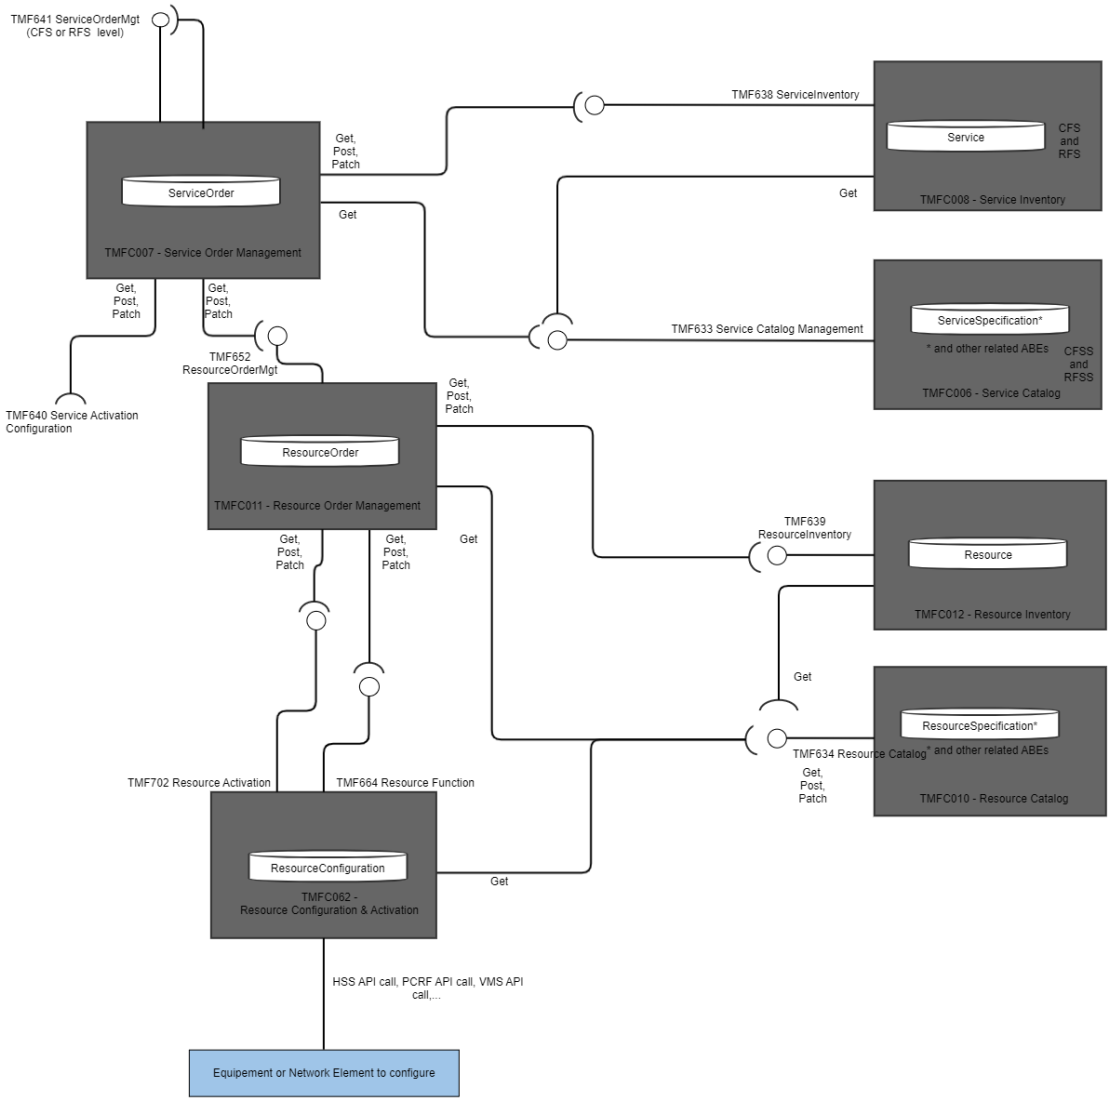
© TM Forum 2026. All Rights Reserved.

4.1.2. Billing Components and Interactions



© TM Forum 2026. All Rights Reserved.

4.2. Production Components and interactions



© TM Forum 2026. All Rights Reserved.

5. Related Documentation

Here are the related documents used for the ODA Component Inventory and Heatmap development:

1. IG1245 Principles to Define ODA Components v1.1.0 (ODA-700):
2. IG1171 ODA Component Definition
3. IG1222 ODA Technical Architecture

6. Administrative Appendix

6.1. Document History

6.1.1. Version History

Version Number	Date Modified	Modified by:	Description of changes
1.0.0	29 Jan 2021	Gaetano Biancardi	Final edits prior to publication
2.0.0	28 May 2021	Gaetano Biancardi	Updated to v2.0.0
3.0	17-Nov-2021	Emmanuel A. Otchere	Included contributions to descriptions for earlier proposed components.
4.0.0	22 Mar 2022	Gaetano Biancardi	Updates according to 2022 sprint 2 ODA Components specifications.
5.1.0	7-Jul-2022	Ian Turkington	Added descriptions to the following components: Welcome, Party Training and Education, Market Strategy and Policy, Market Research, Purchase Management, Experience Management Strategy & Planning, Experience Insight Management. These were reviewed by the project team on and after 5th July 2022. This was to support the component heat mapping exercise which is happening in preparation for DTW (with Andy Tiller)
5.2.0	23 Aug 2022	Ian Turkington	ID number (TMFCnnn) allocated to Product Rating component. Minor change to the description of the Product Rating component
		Sylvie Demarest	Merge of Welcome component with TMFC023 Party Interaction Management, renamed Welcome and Party Interaction Management
	22 November 2022	Elisabeth Andersson	Renamed TMFC023 from Welcome and Party Interaction Management to Party Interaction Management.
	29 November 2022	Elisabeth Andersson	Marked the following Components as specified: From previous sprint TMC010, TMFC028 and from this sprint TMFC014. TMFC23, TMFC24, TMFC29
6.0.0	07 Dec 2022	Goutham Babu	Final edits prior to publication
	14 Dec 2022	Matteo Destino	Added a new component "Permissions & Rights Management" to *Proposed ODA Components Candidates* table. Description is WIP. And requires team review.
7.0.0	13 April 2023	Amaia White	Final edits prior to publication

© TM Forum 2026. All Rights Reserved.

Version Number	Date Modified	Modified by:	Description of changes
8.0.0	13 June 2023	Amaia White	Final edits prior to publication
9.0.0	15 Aug 2023	Amaia White	Final edits prior to publication of v9.0.0
10.0.0	12 Oct 2023	Gaetano Biancardi	Following updates: New ODA Component specification: • TMFC030 Bill Generation Mgmt. Proposed ODA Components Candidates - Description updates (restored from previous versions): • Campaign Management • Experience Insight Management • Knowledge Management Proposed ODA Components Candidates - Functional Block re-classification: • Product / Sales Performance Management: from Core Commerce Mgmt. to Intelligence Mgmt. Proposed ODA Components Candidates - Removal of non IT related; following component removed: • Market Strategy and Policy • Market Research • Brand Management
11.0.0.	12 Dec 2023	Gaetano Biancardi	Component Status Table introduced ODA Components added into the inventory in "Prototype" Status: • TMFC041 Anomaly Detector • TMFC042 Anomaly Predictor • TMFC043 Anomaly Mitigator New Interaction Diagram: Billing Domain ODA Components specified - new: • TMFC031 - Bill Calculation • TMFC022 - Party Privacy Management ODA Components specified - update on existing: • TMFC030 - Bill Generation Mgmt. • TMFC027 - Product Configurator
11.0.0	20-Dec-2023	Amaia White	Final edits prior to publication of v11.0.0
12.0.0		Gaetano Biancardi	**Component Inventory e2e review** Components promoted: TMFC047 Party Problem Management TMFC048 Sales Strategy and Planning TMFC049 Marketing Communications TMFC050 Recommendation Management

20.0.0	18 Jul 2025	Rosie Wilson	Final administrative updates
21.0.0	16 Sep 2025	Rosie Wilson	• Component description update (to align to ODA Component directory): • TMFC003 - 2.0.1 • TMFC020 - 1.1.1 • TMFC022 - 1.1.2 • TMFC027 - 2.1.2 • TMFC039 - 1.1.1 • TMFC041 - 1.1.1 • TMFC054 - 1.0.1 • Component updates and Component description update (to align to ODA Component directory): • TMFC037 - 1.2.1 • TMFC038 - 1.2.1 • Final administrative updates

22.0.0	28 Oct 2025	julien rouland	switch back supply chain components to future as it should be divided into multiple components before being specified
			Update of the 4.1.2 schema about billing.
			• TMFC001 Product Catalog mgmt:
			  ○ Updates to description per agreed YAML updated on 03 Jun 2025
			  ○ 5.2.2 added API ticket as requested
			• TMFC005 Product Inventory mgmt.:
			  ○ Update to reflect productOfferingInstance ABE as mentioned in ISA-414

© TM Forum 2026. All Rights Reserved.

Version Number	Date Modified	Modified by:	Description of changes

			• TMFC010 Resource Catalog Mgmt:
			  ○ Corrected naming format (without spaces) from "Resource Performance Specification BE" to "ResourcePerformanceSpecification BE"
			• TMFC011 Resource Order Mgmt:
			  ○ Overview diagram: corrected TMF Open ID typo for Work Order Mgt API ID in the overview picture: replace TMF679 by TMF697
			  ○ Team agreed the following updates during the call on 07 Jan 2025, Hugo Vaughan (TM Forum) and Gaetano Biancardi will work together to update this in the next revision of the functional specification and YAML file.
			TMF702 - Resource Activation Management API - Optional
			TMF634 - Resource Catalog Management API - Mandatory
			TMF664 - Resource Function Activation Management API - Optional
			TMF639 - Resource Inventory Management API - Mandatory
			• TMFC014 Location Mgmt:
			  ○ updated description
			• TMFC023 Party Interaction Mgmt.
			  ○ Updated to eTOM/SID/FF to 24.0
			  ○ Components specification with TMF688, this API must be removed from the specification (Core Functions - exposed and dependant), and the ODA canvas Operators offer its functions.
			  ○ Components specification with TMF672, this API must be removed from the specification (Core Functions - dependant), and the ODA canvas Operators offer its functions.
			• TMFC024 Billing Account Management
			  ○ updated description
			• TMFC029 Payment Management
			  ○ Resolved comment on SID coverage to correspond to:
			  ▪ Bank ABE
			  ▪ Payment Method ABE

© TM Forum 2026. All Rights Reserved.

Version Number	Date Modified	Modified by:	Description of changes
			▪ PaymentPlan BE (and associated BEs) ▪ PartyPayment BE (and associated BEs) • TMFC030: Bill Generation Management - v3.0.0 ○ Update the SID part to include party bill cycle, and update the expose API resources associated (TMF678) Removed following functions in overlap with bill calc: ▪ 1.3.9.4 Pricing, Discounting, Adjustments & Rebates Application 1.3.9.4.2 Apply Pricing, Discounting, Adjustments & Rebates to Customer Account • TMFC031 Bill Calculation: ○ Removed dependency on TMF666 for the Bill Cycle Specification and instead added TMF678 Bill Cycle operations as that provides the instantiated Bill Cycle for a given period that is required by Bill Calculation. ○ Updated ISA-894 as it has been resolved. In SID rated ProductUsage represents AppliedCustomerBillingProductUsageRate. ○ Added Jira ticket dependency to AP-6883
